Bitdefender®

GravityZone Advanced Business Security

GravityZone Advanced Business Security is an all-in-one security solution that includes protection and unified security management for workstations, servers, email, and mobile devices.

"Six tests within the year 2016 with excellent test results in terms of protection were completed by superb performance scores achieved by the Bitdefender protection solution."

Guido Habicht, CEO AV-TEST GmbH

UNFOLLOW THE TRADITIONAL

Unlike traditional solutions that patch together pre-virtualization and pre-cloud Windows applications, Bitdefender GravityZone **combines all the security services an organization needs into a single delivery platform** and provides the best combination of protection and performance.

KEY BENEFITS

Comprehensive and cost-effective protection

Bitdefender GravityZone Advanced Business Security gives organizations efficient protection for physical or virtual workstations and servers and for mobile devices, with each system taking one unit from the license. Exchange email protection is included with no extra costs and the number of mailboxes covered is proportional to the number of units in the license.

Leading antimalware security and antispam

Bitdefender endpoint security has won the AV-Test Best Performance 2016 Award and the best overall score for protection, performance, and usability. The only solution to have won all 35 VBSpam awards to date, Bitdefender consistently registers top spam detection rates.

Streamlined security management

Organizations can use the cloud-hosted management console or can deploy the console locally. Based on hardened Linux machines wrapped in virtual appliances, the Bitdefender on-premise console is configured and ready to use in under two hours. Its bottom-up design, granular options, and integrations with Active Directory, Citrix XenServer, or VMWare NSX, save time and streamline security processes.

KEY FEATURES

- **One console** offering easy centralized management, easy deployment and enforcement of security policies to any type and number of endpoints in any location;
- **Integration with Active Directory and Citrix** (on-premise console); also integrates with VMware NSX platform, thus ensuring virtual datacenters agentless protection through the dedicated Security Serve
- **One agent** covering any combination of virtualization platforms, cloud providers, operation systems and physical devices;
- **Multiple layers of security** for endpoints: antivirus and antimalware with behavioral monitoring, zero-day threat protection, sandboxing, firewall, device control and content control with anti-phishing and anti-spam for Exchange mail servers.
- Apply policies based on location or user and allow different levels of freedom, save time when creating new policies by using ones that are already created.
- **Universal coverage:**
 - Any endpoint: physical, virtual and cloud;
 - Any form factor: workstation, server, embedded, mobile;
 - Any OS: Windows, Linux, Mac;
 - Any virtualization platform: VMware, Citrix, Microsoft Hyper-V, KVM, Oracle;
 - Organizations of any size: scales from tens to millions of endpoints just by cloning virtual appliances;
 - Smart centralized scanning enables high protection and performance of protected machines by offloading a part of the antimalware processes to one or more centralized security servers.

ANTI-EXPLOIT

Bitdefender GravityZone further augments existing technologies to fight off targeted attacks. The new technology is equipped to tackle advanced, evasive exploits that targeted attacks rely on to penetrate an infrastructure. Anti-exploit techniques are integrated in our proactive Advanced Threat Control technology.

ANTI-RANSOMWARE VACCINE

This vaccine is an additional anti-ransomware defense layer that works by exploiting flaws in the ransomware's method of spreading, and manages to stop it from encrypting. It will protect endpoints against more than 2.8 million known forms of ransomware.
